Chapter 99 and its application

*****General rule: In Customs declarations none of the codes of chapter 99 can be used.*****

For Consignment Note: certain codes and cases in chapter 99 are excepted from customs obligations (Please check Excel file). In such cases you can use this code ONLY in Consignment Note. Because the customs are not interested in that (as it is excepted from customs)

- Normal moves of rolling stock which is already in use and formally registered (and imported when it is produced in a third country): no customs requirements.
- Moves over customs borders of new rolling stock and/or new intermodal units – as merchandise on own wheels – to the new owner: customs requirements must be taken into account.

As a reminder for customs procedures

- all transports covered by a NCTS procedure;
- all transports covered by an Export procedure;
- all transports covered by the “T2 Swiss Corridor” procedure;
- all transports entering the EU, to be notified with an Entry Summary Declaration;
- all transports leaving the EU, to be notified with an Exit Summary Declaration;

Important to remember

- For Wagons/container/rolling stock/ etc. that itself is a commercial object you need to declare and to choose the corresponding HS code for it. please check the excel file.
- **99211000, 99221000, 99222000, 99212000 - Railway wagon as a means of transport, X -axle, empty, moving to or from maintenance/repair:** Please note that there are cases of maintenance of rolling stock in another country, by passing a customs border. Example: maintenance of a French wagon (French owner, French registration) at a wagon atelier in Switzerland. That is regular practice and can be done without customs obligations.
- **!!! But sometimes maintenance can be (much) more than only regular maintenance. It means, when it becomes a renovation of even the entire character of a wagon modifies, “active or passive refinement”. In other words, the (customs) value becomes higher. In that case it is in fact a new wagon, and such far going refinement can only cross customs borders by – at least – notifying the customs in the country of registration.**
- **99214000, 99224000 - Railway wagons as a means of transport, X-axle, empty, moving to or from hire:** It is not to be excluded that long term hire (one year or longer) CAN require customs obligations if there is a deal with a user in another country, under a different customs regime.
 - Example: a French wagon owner rents his wagon to the Serbian railways for a period of two years. If that is the case, it is to be recommended that the RU in the country where the wagon is registered, first contacts the customs, to find out if he must fulfill customs requirements, also in the interest of the foreign party who hires the wagon.
